# International Petroleum Corp. Production Forecast

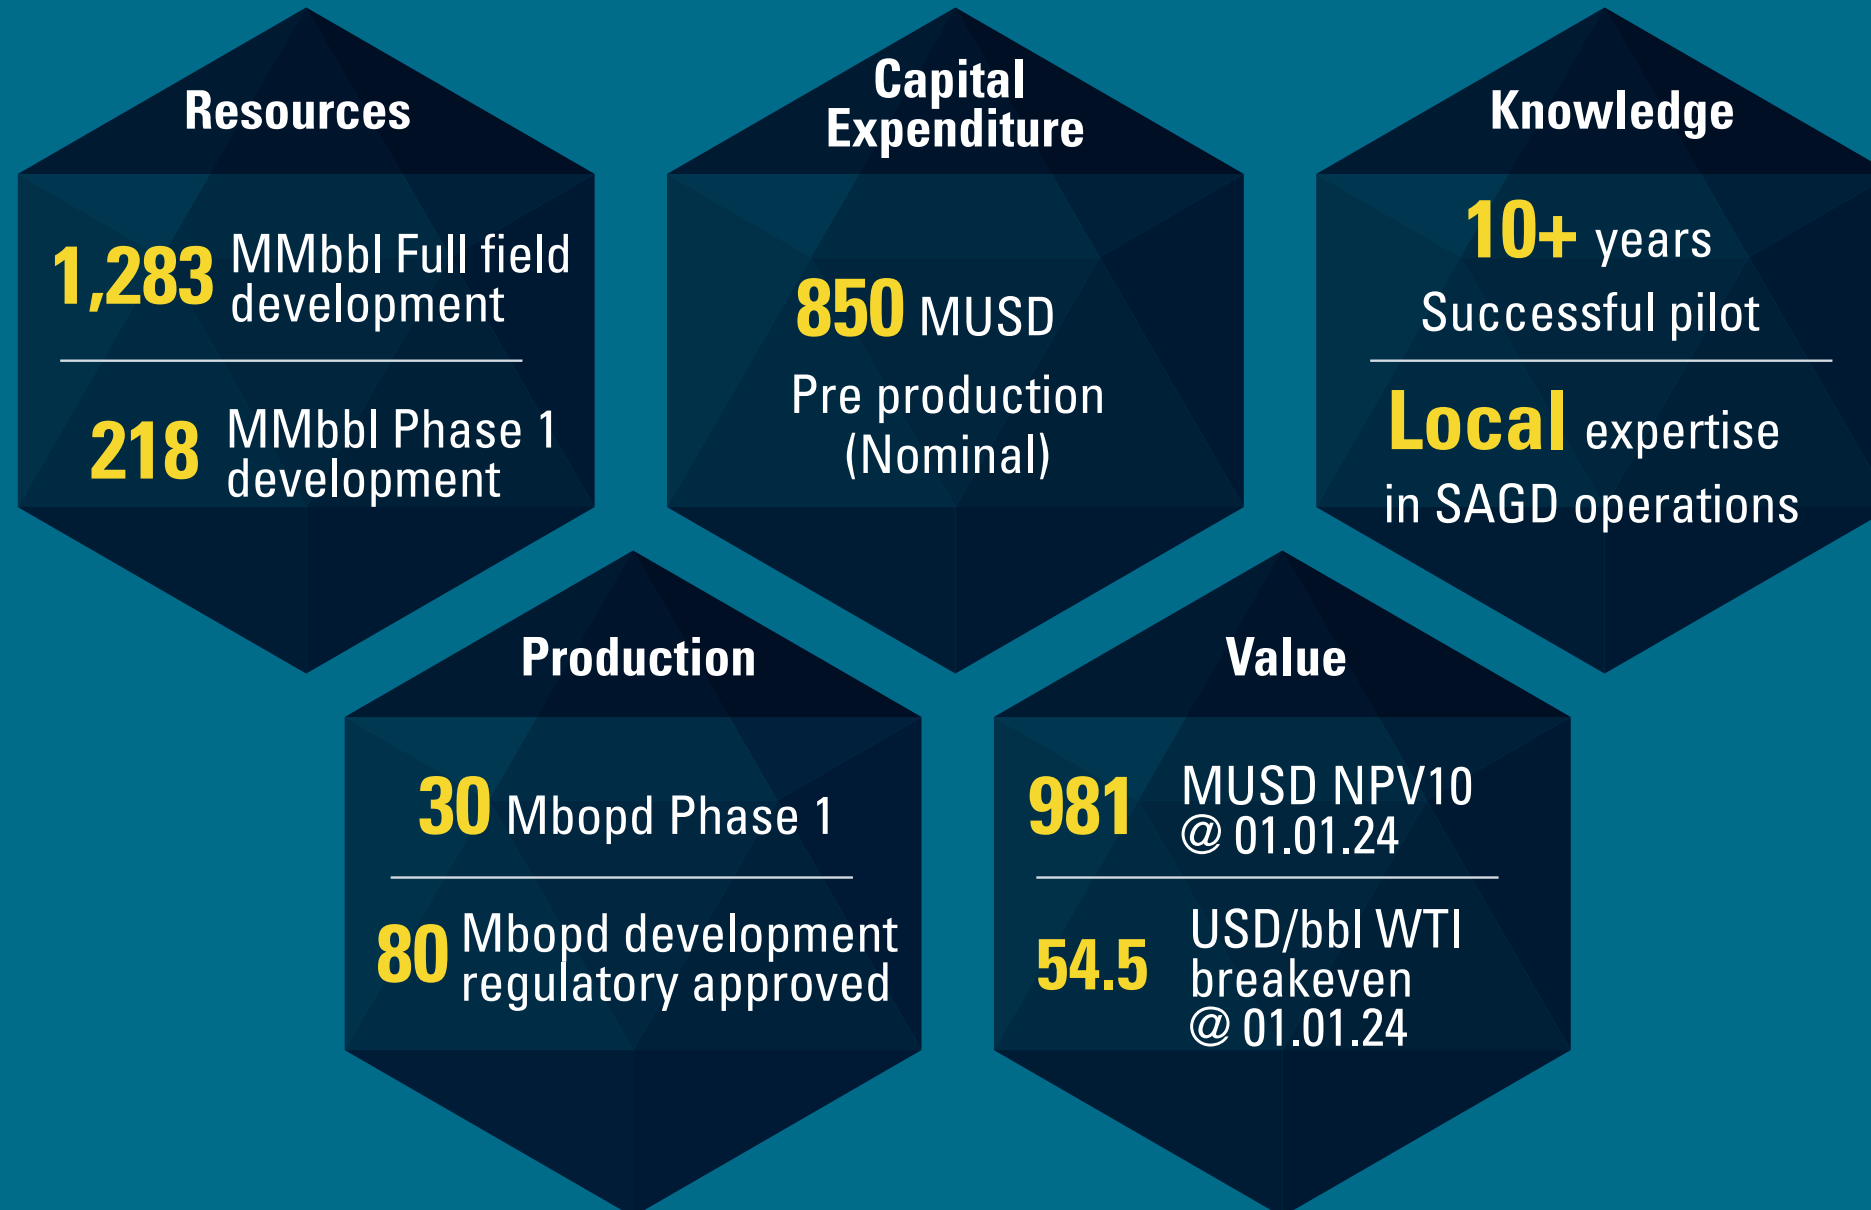

- **Material production growth driven by the Blackrod Phase 1 development**

- 10 year outlook based on proved plus probable reserves (2P)

See Notes and Reader Advisory

# International Petroleum Corp. Blackrod - A World Class Resource

Blackrod Total	
Area, km <sup>2</sup>	130
In-Place Volume, mboe	2,450
Appraisal Wells, #	87
Appraisal Well Density, Wells/km <sup>2</sup>	0.7

Blackrod Phase 1 (Initial Development Area)	
Area, km <sup>2</sup>	14
In-Place Volume, mboe	426
Appraisal Wells, #	35
Appraisal Well Density, Wells/km <sup>2</sup>	2.5

See Notes and Reader Advisory

# International Petroleum Corp. Contingent Resources Growth

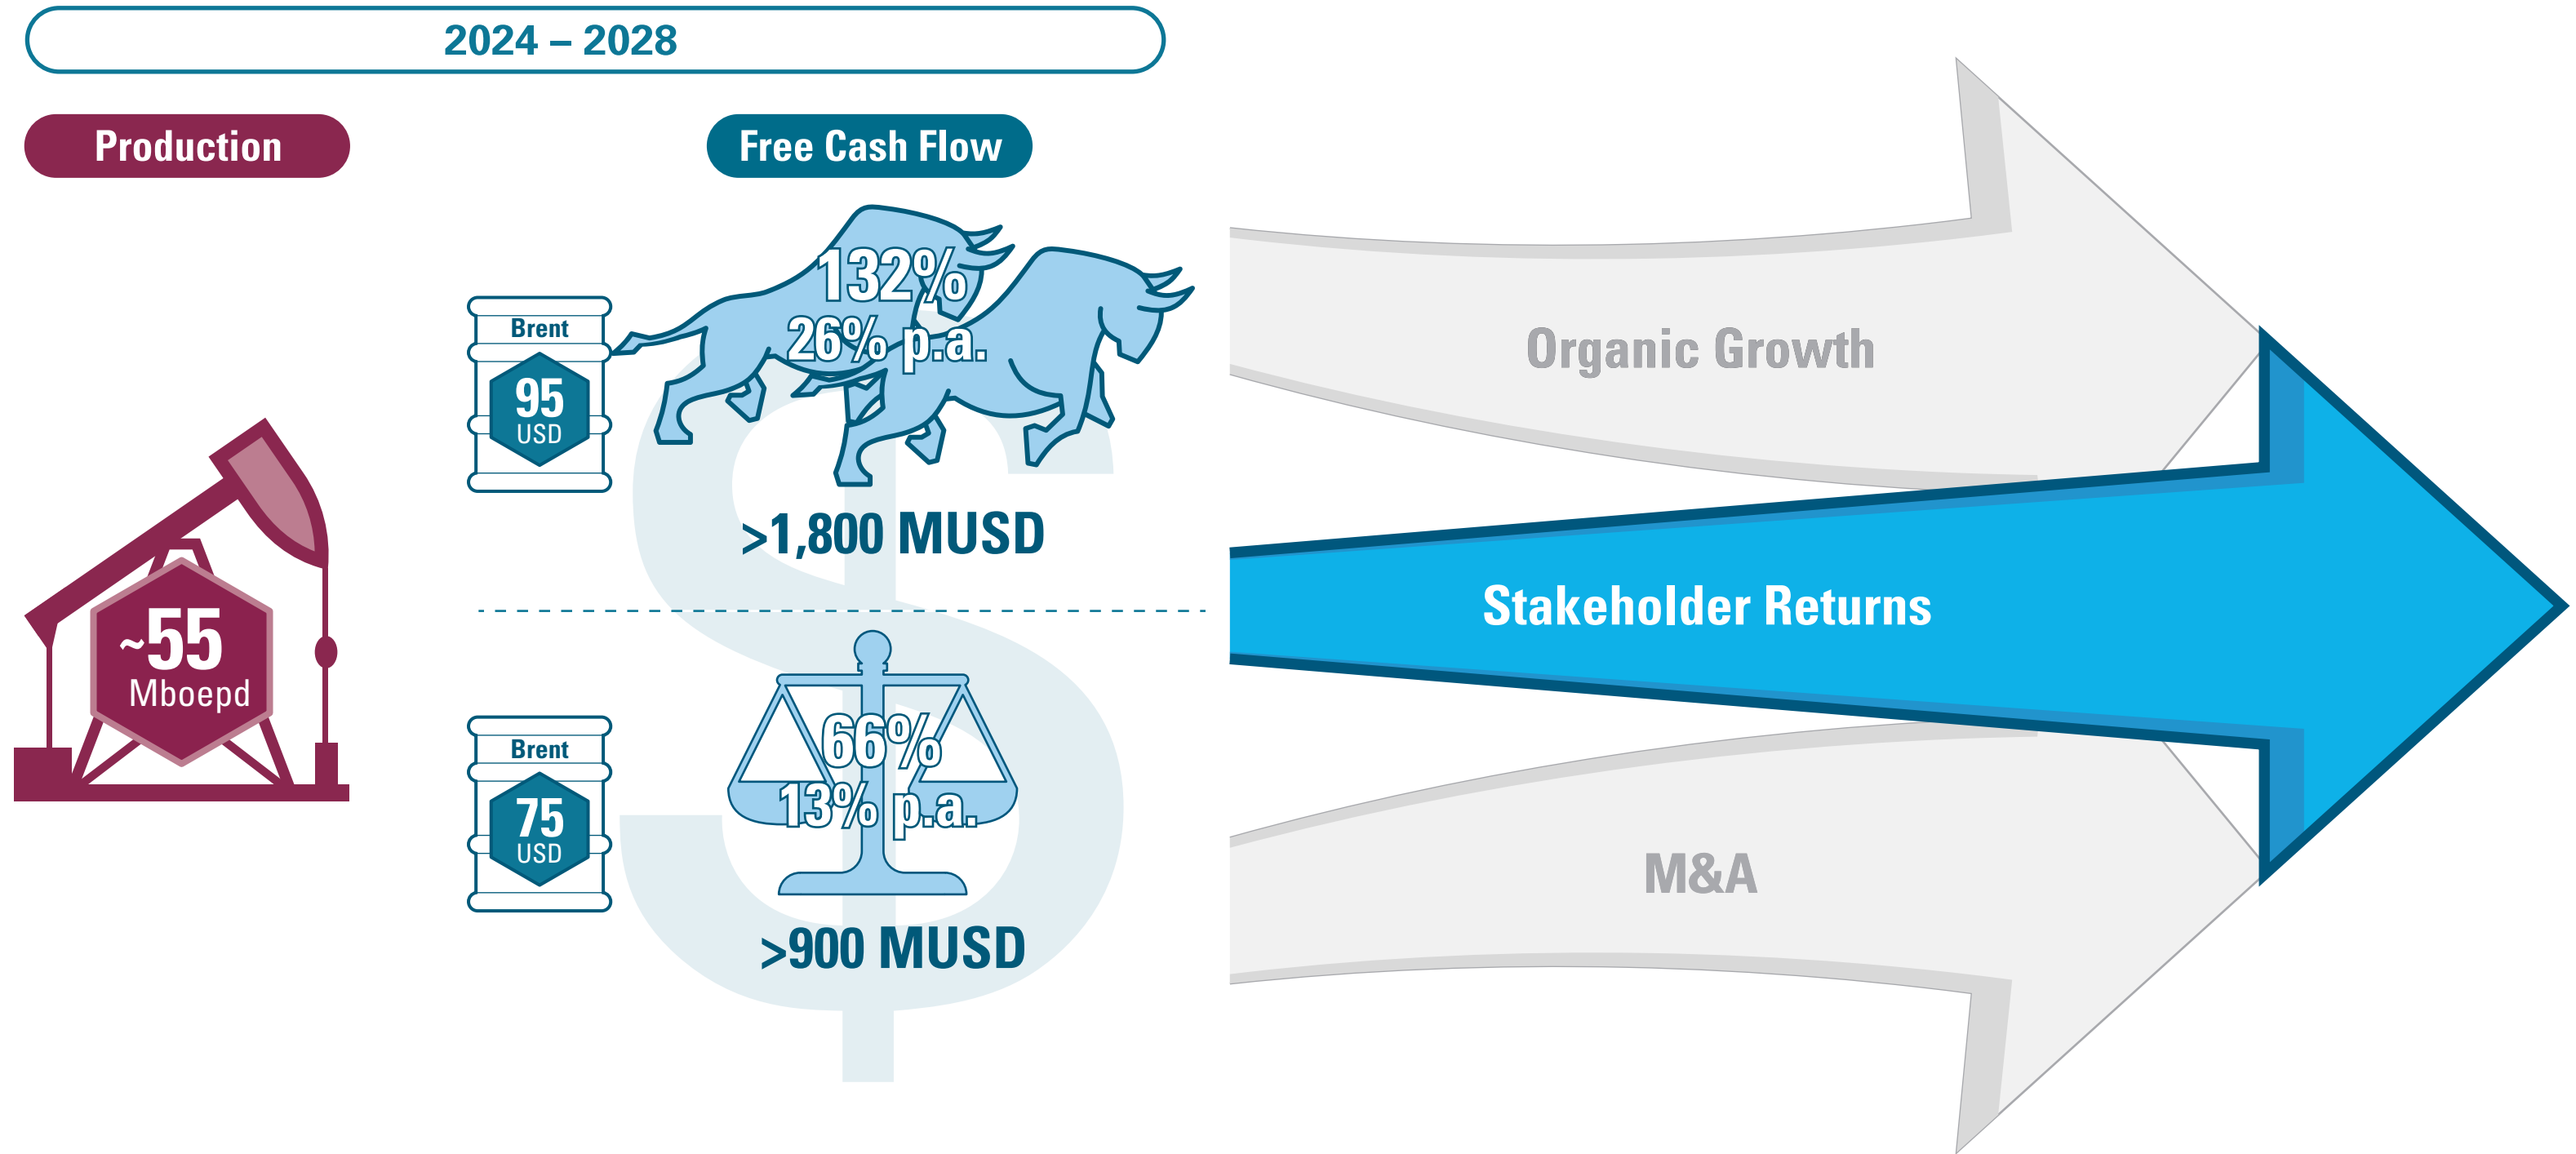

- **More than 1.1 Billion boe to drive organic growth**

- Blackrod future phases
- Additional development opportunities in Canada
- Further infill drilling in Malaysia
- Development upside in France

See Notes and Reader Advisory

# International Petroleum Corp. Strongly Positioned to Create Stakeholder Value

See Notes and Reader Advisory

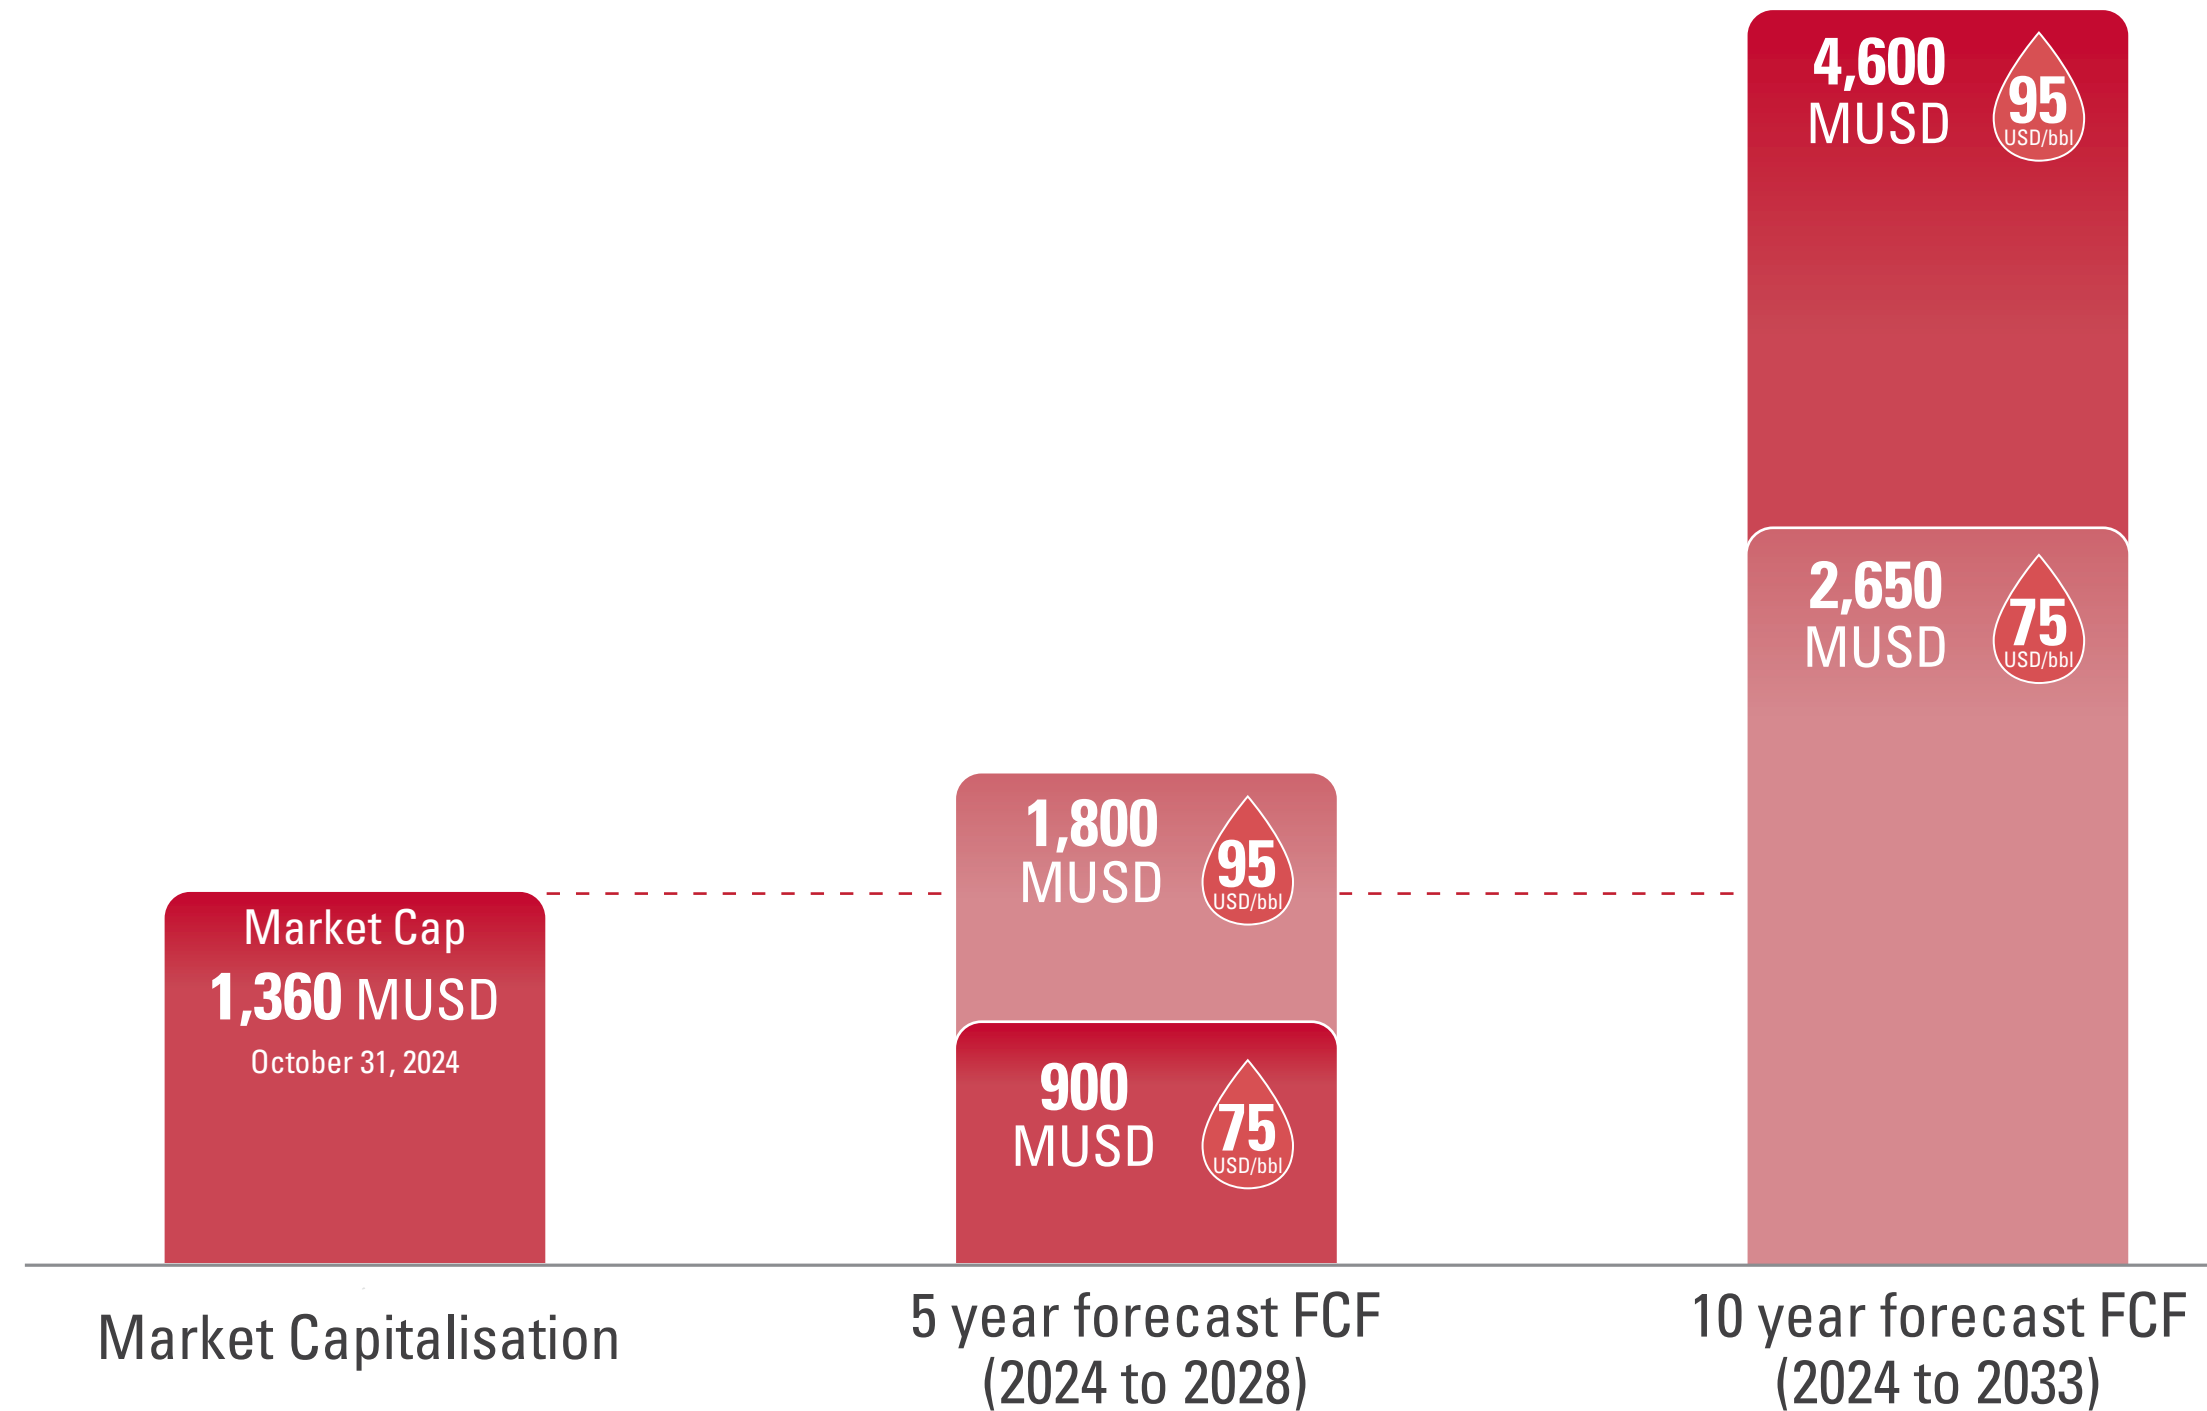

# International Petroleum Corp. Share Repurchase

- 69 million IPC shares repurchased since inception at an average price of SEK 71 / CAD 9.5 per share
- On track to complete 2023/2024 NCIB share repurchase program in November
- Board approval to renew NCIB in December 2024

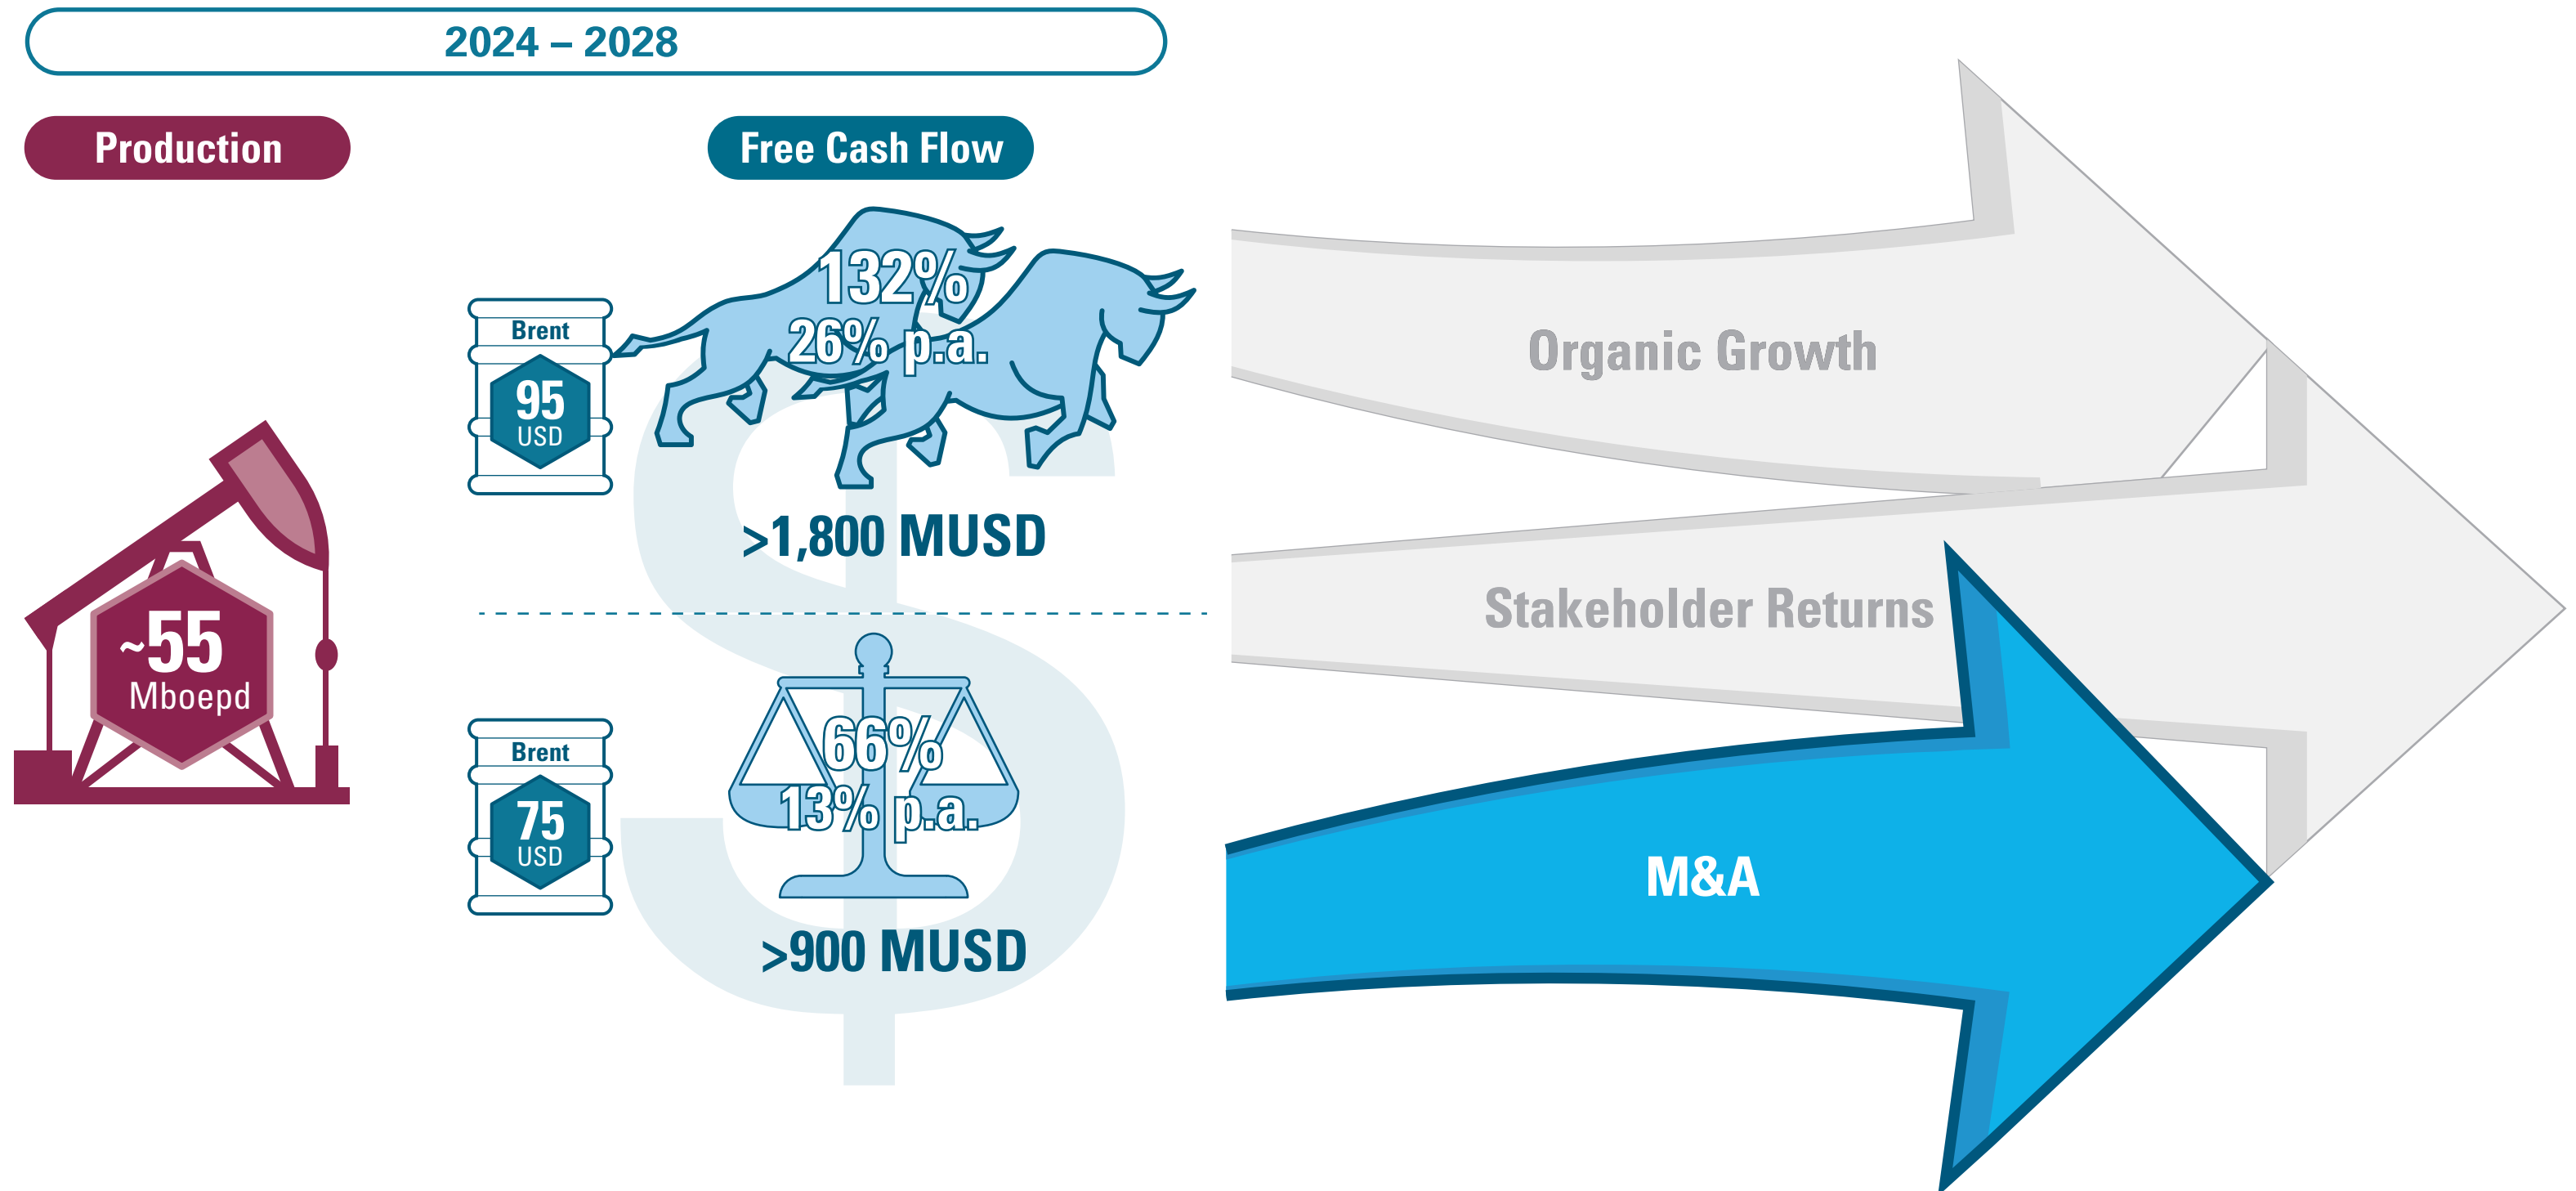

See Notes and Reader Advisory

# International Petroleum Corp. Market Cap Liquidation

# International Petroleum Corp. Strongly Positioned to Create Stakeholder Value

See Notes and Reader Advisory

# International Petroleum Corp. Value Created from Acquisitions

- 2.5 Billion USD in value added from 5 accretive acquisitions
- Pre Blackrod funding, FCF generated from acquisitions equals 91% of total acquisition price

# 2024 Overview

# International Petroleum Corp. Reserves and Contingent Resources

- **Year end 2023 2P reserves of 468 MMboe**
  - 78% reserves replacement
- **IPC reserve life index 27 years**
- **Continued focus on contingent resource maturation**

Canada Thermal Crude 74%

### 2P Reserves (MMboe)

### Contingent Resources

Canada Blackrod, 1,066

See Notes and Reader Advisory

# International Petroleum Corp. 2024 Production Operations

- **2024 production guidance of 46 to 48 Mboepd**
  - Low decline rate with limited base business investment
- **2024 full year operating costs expected to be below 18 USD/boe**

## 2024 Production Guidance

## Production (Mboepd)

## 2024 Forecast Operating Costs

- High — Guidance range
- Low — range
- Gas
- Oil WCS
- Oil Brent

See Notes and Reader Advisory

# International Petroleum Corp. 2024 Capital Expenditure

**2024 Expenditure 437 MUSD**

- Blackrod 362
- Non-Blackrod 67
- Decommissioning 8

**Canada  
413 MUSD**

- Blackrod Phase 1
- Suffield Area drilling
- Ferguson drilling
- Mooney Ph 2 EOR

**France  
3 MUSD**

- Optimization activity
- Development studies

**Malaysia  
21 MUSD**

- Well workovers
- Optimization activity
- Development studies

- Capital investment of 437 MUSD for full year 2024 maintained
- 313 MUSD spent in first 9 months 2024

See Notes and Reader Advisory

# International Petroleum Corp. 5 Year + 5 Year Outlook

- **Strongly positioned for long-term growth**
- **~55 Mboepd forecast average net production over the next 5 years**
  - 75% of 2P reserves remaining beyond 2028
  - 50% of 2P reserves remaining beyond 2033
- **Long-term investment strategy**
  - Blackrod Phase 1 development
  - Growth capital spend on Onion Lake Thermal
  - Suffield and Ferguson drilling
- **Retain discretion on pace of base business development**

## Production Outlook

**10 Year Business Plan OPEX = ~18 USD/boe**

## Capital Outlook

# Asset Overview Canada

# IPC Canada Overview

**Peak spend year at  
Blackrod Phase 1 development**

## **Non-Blackrod development expenditure**

- Suffield Area Ellerslie drilling
- Ferguson development drilling
- Mooney Phase 2 EOR flood
- Production optimization at various assets

**Optionality to adjust  
base business capital investments**

See Notes and Reader Advisory

# IPC Canada Blackrod Phase 1 Progress Update

- **Blackrod Phase 1 development project progressing in line with schedule and budget**
- **Facility construction continuing on plan**
- **Major equipment delivery on track**
- **Site civil works and access road upgrades are largely completed**
- **Production well pair drilling ahead of schedule**

Drilling ongoing (Drilling on Pad A)

Inlet degasser at site

Heat recovery steam generators in place

Construction - tank farm

Blackrod Central Processing Facility (CPF)

Boilers in place

Pipe rack modules

# IPC Canada Blackrod Phase 1 Schedule - Major Activity Year

See Notes and Reader Advisory

# IPC Canada Onion Lake Thermal

- **Planned maintenance shutdown successfully completed**
- **Continue ramp up of latest production sustaining Pad L wells**

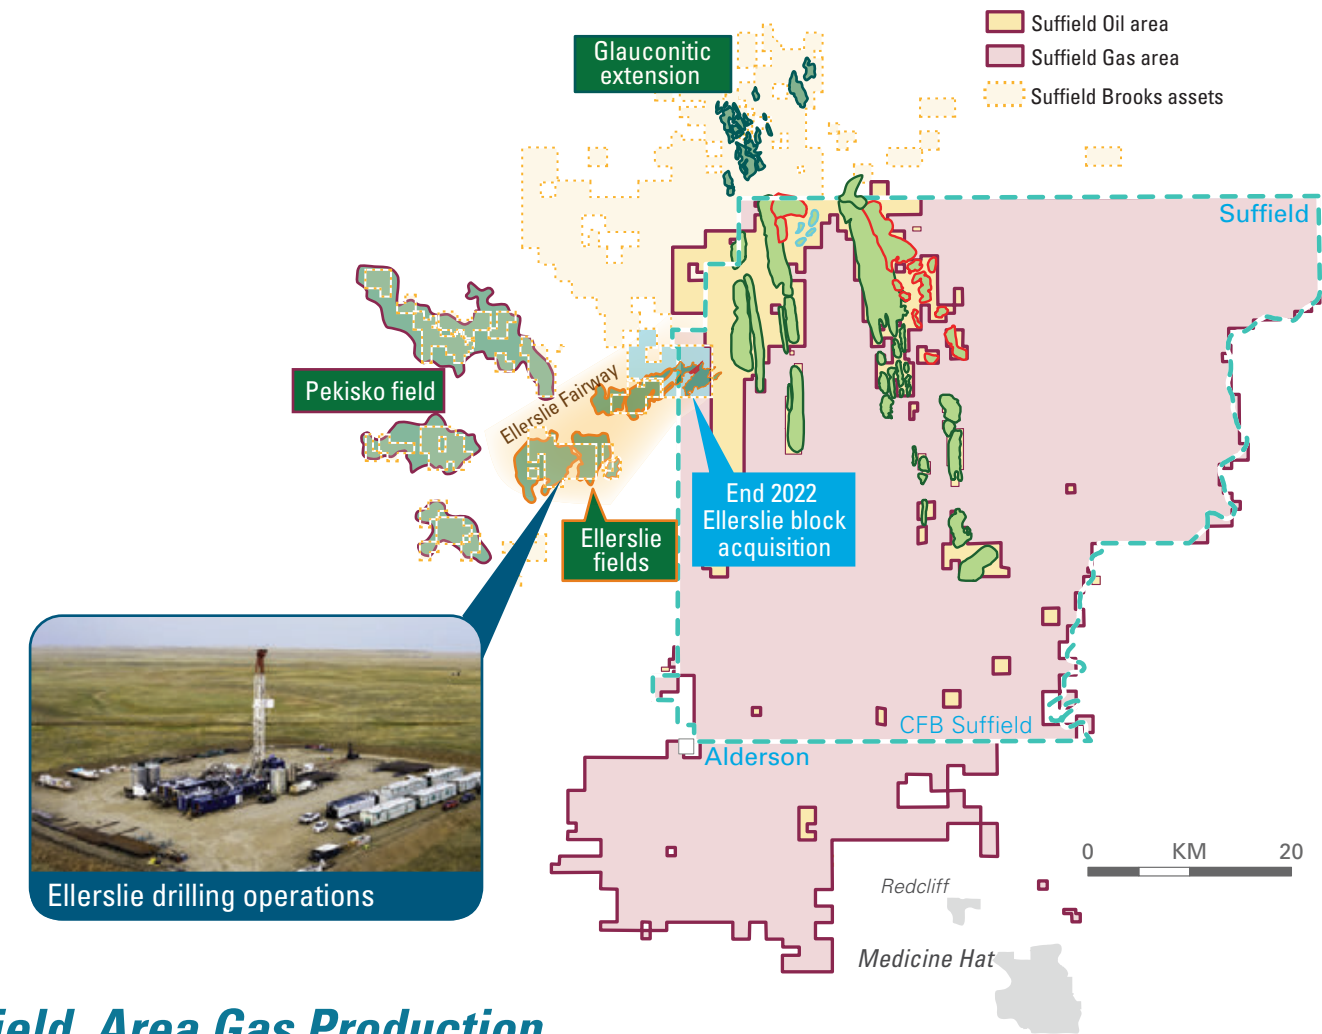

See Notes and Reader Advisory

# IPC Canada Suffield Area Assets

- **Historical decline rates offset through development and optimisation**
- **Focus on Ellerslie drilling continues**
  - Three additional wells sanctioned bringing total 2024 wells from five to eight
  - Five wells online performing in line with expectation

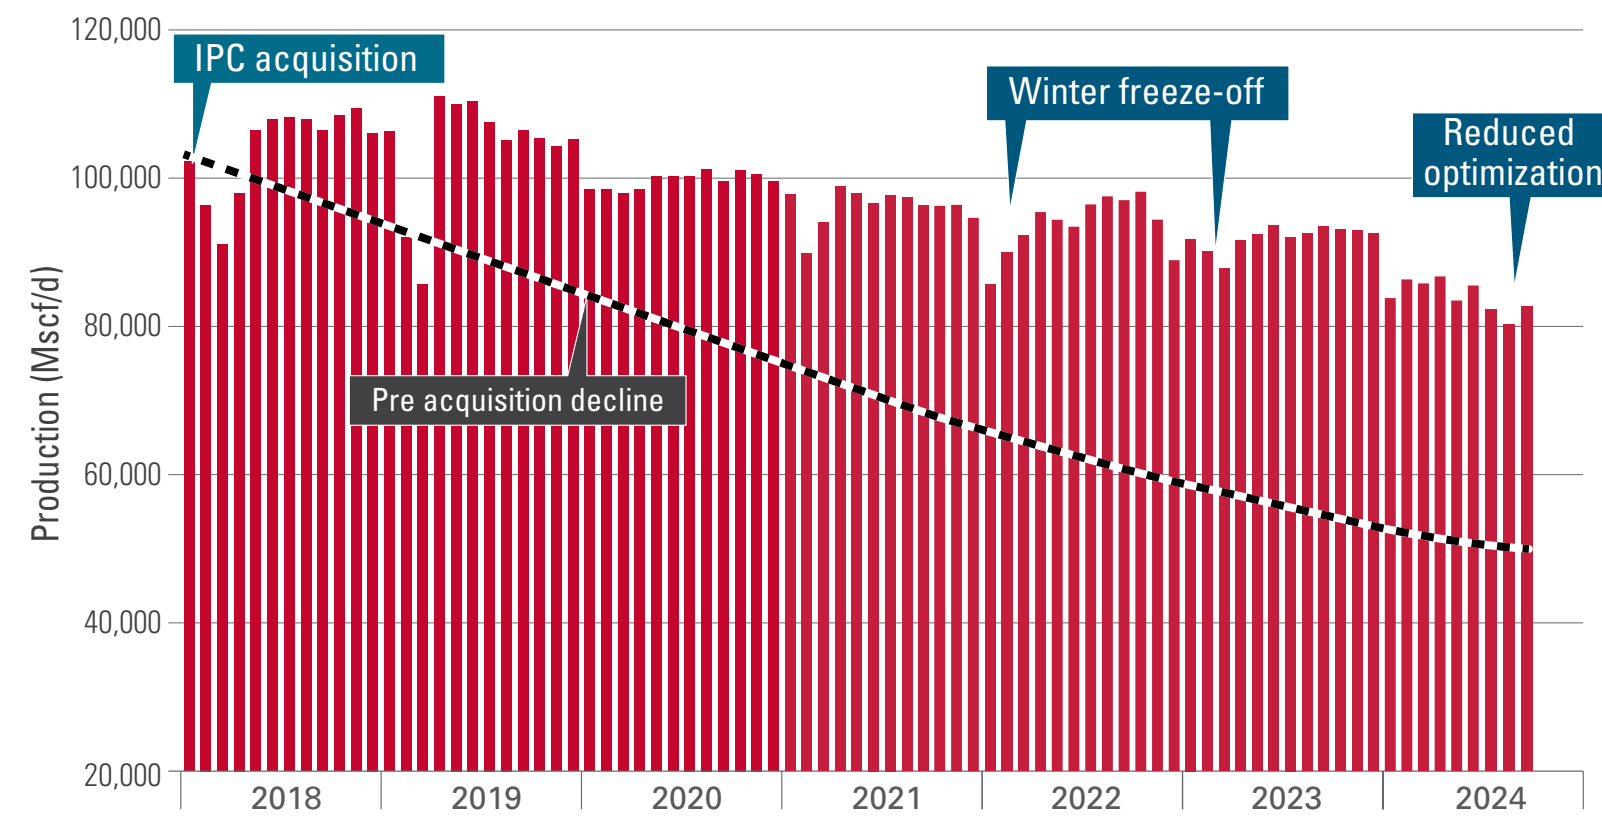

## Suffield/Alderson/Brooks Assets

### Suffield Area Oil Production

### Suffield Area Gas Production

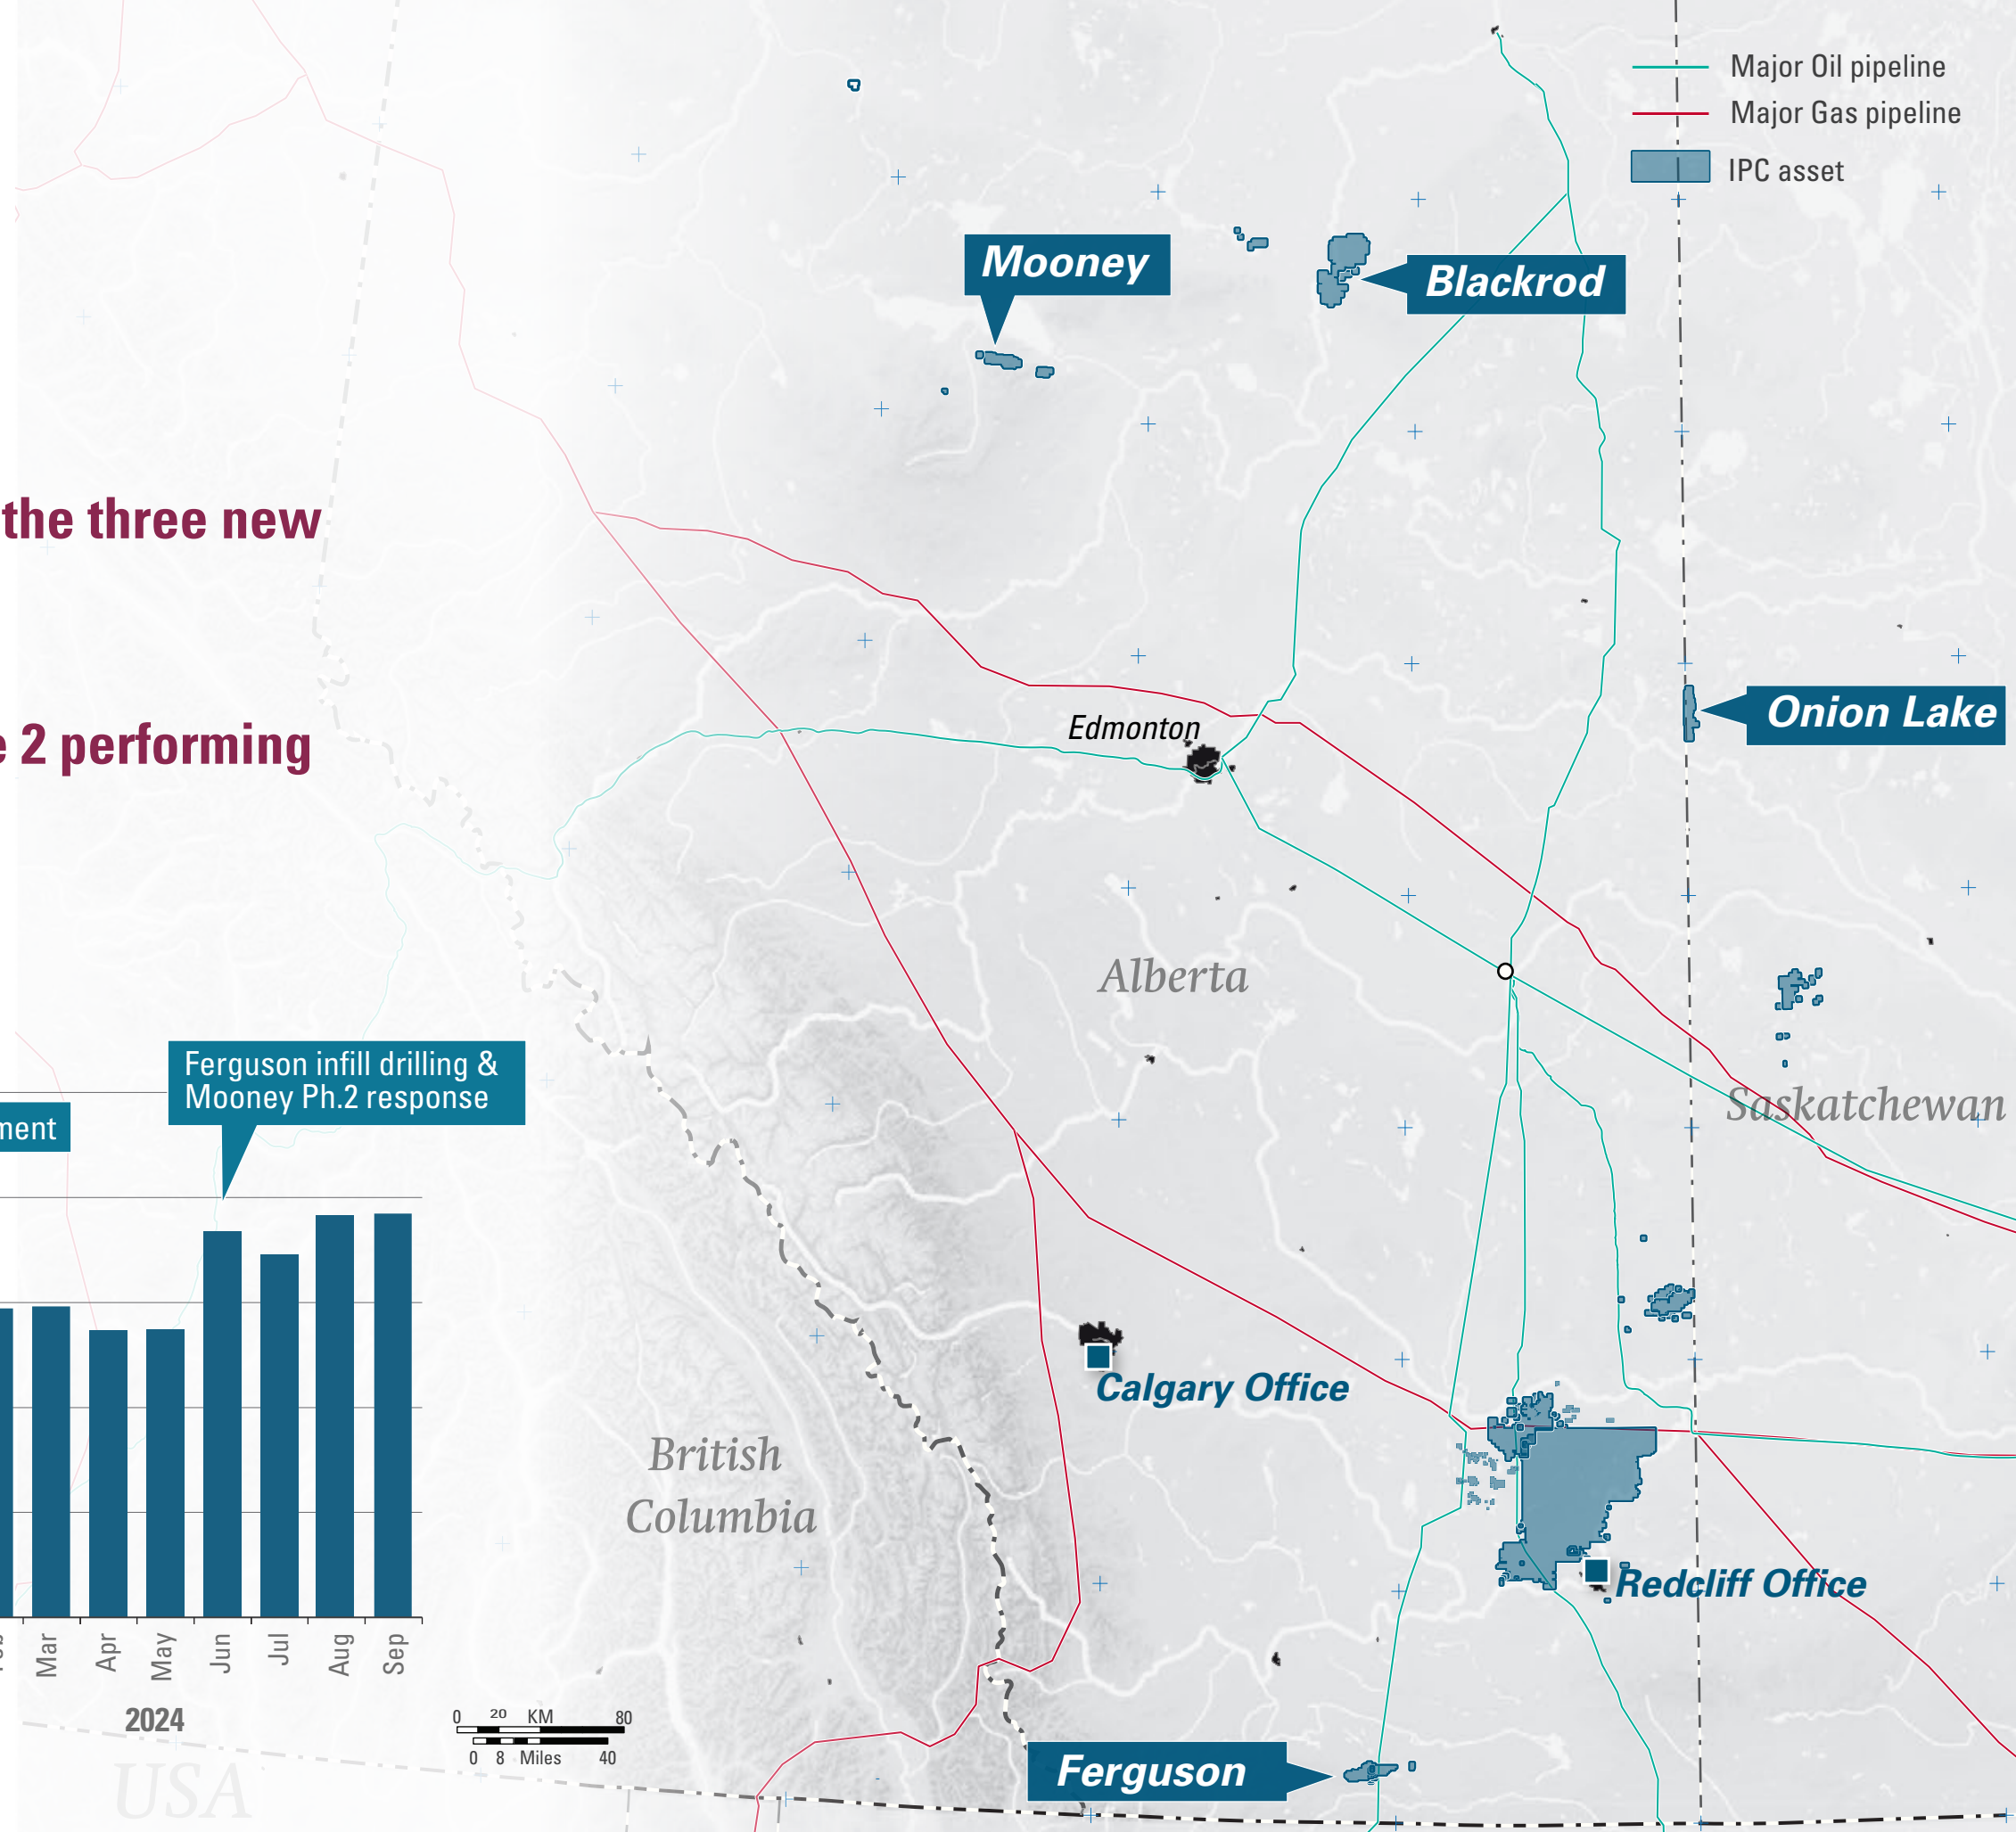

See Notes and Reader Advisory

# IPC Canada Other Assets Overview

- Continued strong performance from the three new Ferguson production wells
- EOR polymer flood at Mooney Phase 2 performing ahead of expectation

Canada Other Assets

# Notes

## Page 2: First Nine Months 2024 Highlights

- For production figures, see Reader Advisory, including “Supplemental Information regarding Product Types” in “Reserves and Resources Advisory” and the annual information form for the year ended December 31, 2023 (AIF) available on IPC’s website at [www.international-petroleum.com](http://www.international-petroleum.com) and filed under IPC’s profile on SEDAR+ at [www.sedarplus.ca](http://www.sedarplus.ca).
- Operating cash flow (OCF), free cash flow (FCF), earnings before interest, tax, depreciation and amortization (EBITDA), operating costs and net cash/net debt are “Non-IFRS Measures”. See Reader Advisory and the management’s discussion and analysis for the three months and nine months ended September 30, 2024 (MD&A) available on IPC’s website at [www.international-petroleum.com](http://www.international-petroleum.com) and filed under IPC’s profile on SEDAR+ at [www.sedarplus.ca](http://www.sedarplus.ca), including “Non-IFRS Measures”.
- Capital expenditure of USD 437 million includes decommissioning expenditure of USD 8 million.
- Emissions intensity is the ratio between oil and gas production and the associated carbon emissions, and net emissions intensity reflects gross emissions less operational emission reductions and carbon offsets.
- IPC’s ability to achieve the net emissions intensity target is subject to risks and uncertainties, see MD&A and AIF.

## Page 3: Reserves Growth

- 2P reserves are as at December 31, 2023. See Reader Advisory and AIF, including “Reserves and Resources Advisory”.
- Reserve life index (RLI) is calculated by dividing the 2P reserves of 468 MMboe as at December 31, 2023, by the mid-point of the 2024 production guidance of 46,000 to 48,000 boepd.

## Page 4: Strongly Positioned to Create Stakeholder Value “Organic Growth”

- In respect of estimated production, see Reader Advisory and AIF, including “Reserves and Resources Advisory”.
- FCF and net cash are “Non-IFRS Measures”. See Reader Advisory and MD&A.
- FCF includes net cash of USD 58 million as at December 31, 2023.
- FCF yield is based on IPC’s market capitalization at close on October 31, 2024 (USD 1,360 million based on 120.5 SEK/share, 120.24 million IPC shares outstanding and 10.65 SEK/USD).
- Estimated production and FCF generation are based on IPC’s current business plans over the periods of 2024 to 2028 and 2029 to 2033. Assumptions include average net production of approximately 55 Mboepd over the period of 2024 to 2028, average net production of approximately 65 Mboepd over the period of 2029 to 2033, average Brent oil prices of USD 75 to 95 per boe escalating by 2% per year, and average Brent to Western Canadian Select differentials and average gas prices as estimated by IPC’s independent reserves evaluator and as further described in the AIF. IPC’s current business plans and assumptions, and the business environment, are subject to change. Actual results may differ materially from forward-looking estimates and forecasts.

## Page 5: Production Forecast

- In respect of estimated production, see Reader Advisory and AIF, including “Reserves and Resources Advisory”.
- Estimated production is based on IPC’s current business plans over the periods of 2024 to 2028 and 2029 to 2033. IPC’s current business plans and assumptions, and the business environment, are subject to change. Actual results may differ materially from forward-looking estimates and forecasts.

## Page 6: Blackrod A World Class Resource

- 2P reserves and contingent resources (best estimate, unrisks) are as at December 31, 2023. See Reader Advisory and AIF, including “Reserves and Resources Advisory”.
- In respect of estimated production, see Reader Advisory and AIF, including “Reserves and Resources Advisory”.
- NPV is after tax, discounted at 10% and based upon the forecast prices and other assumptions further described in the AIF.
- For risks and uncertainties related to the Blackrod Phase 1 project, see MD&A and AIF.

## Page 7: Contingent Resources Growth

- Contingent resources (best estimate, unrisks) are as at December 31, 2023. See Reader Advisory and AIF, including “Reserves and Resources Advisory”.

## Page 8: Strongly Positioned to Create Stakeholder Value “Stakeholder Returns”

- See Notes for Page 4: “Strongly Positioned to Create Stakeholder Value”.

## Page 9: Share Repurchase

- For production figures, see Reader Advisory and AIF, including “Reserves and Resources Advisory”.
- 2P reserves and contingent resources (best estimates, unrisks) are as at December 31, 2023. See Reader Advisory and AIF, including “Reserves and Resources Advisory”.
- For reserves life, see Reader Advisory and AIF, including “Reserves and Resources Advisory”.
- See Notes for Page 13: “Net Asset Value”

## Page 10: Market Cap Liquidation

- FCF is a “Non-IFRS Measure”. See Reader Advisory and MD&A.
- Estimated production and FCF generation are based on IPC’s current business plans over the periods of 2024 to 2028 and 2029 to 2033, including net cash of USD 58 million as at January 1, 2024. Assumptions include average net production of approximately 55 Mboepd over the period of 2024 to 2028, average net production of approximately 65 Mboepd over the period of 2029 to 2033, average Brent oil prices of USD 75 to 95 per boe escalating by 2% per year, and average Brent to Western Canadian Select differentials and average gas prices as estimated by IPC’s independent reserves evaluator and as further described in the AIF. IPC’s current business plans and assumptions, and the business environment, are subject to change. Actual results may differ materially from forward-looking estimates and forecasts.

## Page 11: Strongly Positioned to Create Stakeholder Value “M&A”

- See Notes for Page 4: “Strongly Positioned to Create Stakeholder Value”.

## Page 12: Value Created from Acquisition

- FCF is a “Non-IFRS Measure”. See Reader Advisory and MD&A.
- NPV is after tax, discounted at 10% and based upon the forecast prices and other assumptions further described in the AIF.

## Page 13: Net Asset Value (MUSD)

- NPV is after tax, discounted at 10% and based upon the forecast prices and other assumptions further described in the AIF. NAV is calculated as NPV plus net cash of USD 58 million as at December 31, 2023.
- Net cash is a “Non-IFRS Measure”. See Reader Advisory and MD&A.
- IPC’s market capitalization is at close on October 31, 2024 (USD 1,360 million based on 120.5 SEK/share, 120.24 million IPC shares outstanding and 10.65 SEK/USD).

## Page 14: Creating Stakeholder Value - 5 Year + 5 Year Free Cash Flow

- See Notes for Page 4: “Strongly Positioned to Create Stakeholder Value”.
- 2P reserves as at January 1, 2029 assumed to be 2P reserves as at December 31, 2023 less estimated production over the period of 2024 to 2028. See Reader Advisory and AIF, including “Reserves and Resources Advisory”.

## Page 15: Sustainability

- Scope 1 net emissions intensity target is compared to IPC’s 2019 net emissions intensity baseline.
- Emissions intensity is the ratio between oil and gas production and the associated carbon emissions, and net emissions intensity reflects gross emissions less operational emission reductions and carbon offsets.
- IPC’s ability to achieve the net emissions intensity target is subject to risks and uncertainties, see MD&A and AIF.

## Page 18: Reserves and Contingent Resources

- 2P reserves and contingent resources (best estimate, unrisks) are as at December 31, 2023. See Reader Advisory and AIF, including “Reserves and Resources Advisory”.
- Reserves replacement ratio is based on 2P reserves of 471.5 MMboe as at December 31, 2022 (not including 2P reserves related to the Brooks assets acquired in the Cor4 acquisition), sales production during 2023 of 17.7 MMboe, net additions to 2P reserves during 2023 of 16.0 MMboe, other revisions downward of 2.2 MMboe, and 2P reserves of 468 MMboe as at December 31, 2023.
- Reserve life index (RLI) is calculated by dividing the 2P reserves of 468 MMboe as at December 31, 2023, by the mid-point of the 2024 production guidance of 46,000 to 48,000 boepd.

## Page 19: 2024 Production Operations

- In respect of estimated production, see Reader Advisory and AIF, including “Reserves and Resources Advisory”.
- Estimated production is based on IPC’s current business plans for 2024. IPC’s current business plans and assumptions, and the business environment, are subject to change. Actual results may differ materially from forward-looking estimates and forecasts.
- Operating costs is a “Non-IFRS Measure”. See Reader Advisory and MD&A.

## Page 20: 2024 Capital Expenditure

- Capital expenditure forecast of USD 437 million includes decommissioning expenditure forecast of USD 8 million

## Page 21: 5 Year + 5 Year Outlook

- In respect of estimated production, see Reader Advisory and AIF, including “Reserves and Resources Advisory”.
- Estimated production, operating costs and capital expenditures are based on IPC’s current business plans over the periods of 2024 to 2028 and 2029 to 2033. IPC’s current business plans and assumptions, and the business environment, are subject to change. Actual results may differ materially from forward-looking estimates and forecasts.
- 2P reserves are as at December 31, 2023. See Reader Advisory and AIF, including “Reserves and Resources Advisory”.
- 2P reserves as at January 1, 2029 and January 1, 2034 assumed to be 2P reserves as at December 31, 2023 less estimated production over the periods of 2024 to 2028 and 2029 to 2033, respectively.
- Operating costs is a “Non-IFRS Measure”. See Reader Advisory and MD&A.

## Page 26: Blackrod Phase 1 Progress Update

- For risks and uncertainties related to the Blackrod Phase 1 project, see MD&A and AIF.

## Page 27: Blackrod Phase 1 Schedule - Major Activity Year

- For risks and uncertainties related to the Blackrod Phase 1 project, see MD&A and AIF.

## Page 30: Canada Other Assets Overview

- For production figures, see Reader Advisory and AIF, including “Reserves and Resources Advisory”.

## Page 33: Malaysia Operations Overview

- For production figures, see Reader Advisory and AIF, including “Reserves and Resources Advisory”.

## Page 34: France Operations Overview

- For production figures, see Reader Advisory and AIF, including “Reserves and Resources Advisory”.

## Page 35: 2024 Summary

- See Notes for Page 5: “Production Forecast”, Page 18: “Reserves and Contingent Resources”, Page 19: “2024 Production Operations” and Page 20: “2024 Capital expenditure”.

## Page 37: Shareholder Distribution Framework

- For production figures, see Reader Advisory and AIF, including “Reserves and Resources Advisory”.
- FCF, EBITDA and net debt are “Non-IFRS measures”. See Reader Advisory and MD&A.
- Estimated production and FCF generation are based on IPC’s current business plans for 2024. IPC’s current business plans and assumptions, and the business environment, are subject to change. Actual results may differ materially from forward-looking estimates and forecasts.

## Page 39: 2024 CMD Guidance

- See Notes for Page 19: “2024 Production Operations” and Page 20: “2024 Capital Expenditure”.
- Operating costs, OCF, FCF and EBITDA are “Non-IFRS Measures”. See Reader Advisory and MD&A.

## Page 41: Margin Netback (USD/boe)

- See Notes for Page 19: “2024 Production Operations”.
- Operating costs is a “Non-IFRS Measure”. See Reader Advisory and MD&A.

# Notes

## Page 42: 2024 Operating Costs (USD/boe)

- Operating costs is a “Non-IFRS Measure”. See Reader Advisory and MD&A.

## Page 43: Operating Cash Flow and EBITDA Netback (USD/boe)

- See Notes for Page 41: “Margin Netback”.
- OCF and EBITA are a “Non-IFRS Measures”. See Reader Advisory and MD&A.

## Page 44: Profit Netback (USD/boe)

- See Notes for Page 41: “Margin Netback”.

## Page 45: Oil Sensitivity to WTI/WCS Differential

- OCF and EBITDA costs are “Non-IFRS Measures”. See Reader Advisory and MD&A.

## Page 46: Gas Sensitivity to Realised Canadian Gas Price

- OCF and EBITDA costs are “Non-IFRS Measures”. See Reader Advisory and MD&A.

## Page 47: Free Cash Flow (USD/boe)

- See Notes for Page 43: “Operating Cash Flow and EBITDA Netback”.
- OCF and FCF are “Non-IFRS Measures”. See Reader Advisory and MD&A.
- Capital expenditures (excluding Blackrod Phase 1) includes E&A and decommissioning expenditure.

## Page 50: Net Present Value per Share

- NPV is after tax, discounted at 10% and based upon the forecast prices and other assumptions further described in the AIF.
- NAV is calculated as NPV plus net cash of USD 58 million as at December 31, 2023
- Net cash/net debt are “Non-IFRS Measures”. See Reader Advisory and MD&A.
- NPV per share is based on 126,992,066 IPC shares outstanding as at January 1, 2024.
- All figures as at December 31, 2023, except enterprise value is IPC’s market capitalization on October 31, 2024 (USD 1,360 million based on 120.5 SEK/share, 120.24 million IPC shares outstanding and 10.65 SEK/USD) plus net debt of USD 157 million as at September 30, 2024.

## Page 51: Net Asset Value (NAV) Changes (MUSD)

- See Notes to Page 50: “Net Present Value per Share”.

## Page 52: The Power of Growth and Buy Backs

- See Notes for Page 5: “Production Forecast”.
- FCF and net cash are “Non-IFRS Measures”. See Reader Advisory and MD&A.
- Estimated FCF generation is based on IPC’s current business plans over the periods of 2024 to 2028. Assumptions include average net production of approximately 55 Mboepd over the period of 2024 to 2028, average Brent oil prices of USD 75 to 95 per boe escalating by 2% per year, and average Brent to Western Canadian Select differentials and average gas prices as estimated by IPC’s independent reserves evaluator and as further described in the AIF. IPC’s current business plans and assumptions, and the business environment, are subject to change. Actual results may differ materially from forward-looking estimates and forecasts.
- Estimated NPV is after tax, discounted at 10% and based upon the forecast prices and other assumptions further described in the AIF, as calculated by IPC. Estimated NPV as at January 1, 2029 is USD 3.3 billion to 5.2 billion (assuming average Brent oil prices of USD 75 to 95 per boe escalating by 2% per year). Estimated NAV is calculated as NPV with net cash as at January 1, 2029 of approximately USD 900 million in Case 1 and approximately USD 500 million in Case 2 (USD 75 per boe escalating at 2% per year), approximately USD 1,800 million in Case 1 and approximately USD 1,100 million in Case 2 (USD 95 per boe escalating at 2% per year), and zero net cash in Case 3, assuming the use of forecast cumulative FCF to fund share repurchase programs at SEK 115 to 215 per share over the period of 2024 to 2028. NAV per share assumes issued and outstanding shares of approximately 126.4 million in Case 1, 94.1 million in Case 2 and 44.9 million in Case 3 as at January 1, 2029, assuming no change in the number of shares held by insiders and management of IPC to January 1, 2029. NPV, NAV and FCF are based on IPC’s current business plans over the period of 2024 to 2028. IPC’s current business plans and assumptions, and the business environment, are subject to change. Actual results may differ materially from forward-looking estimates and forecasts. There can be no assurance that IPC will acquire shares under current or future share repurchase programs. NAV per share is not predictive and may not be reflective of current or future market prices for IPC shares. See Reader Advisory, including “Forward-Looking Statements”.
- SEK amounts converted into CAD at estimated foreign exchange rate of 7.8 SEK to 1 CAD.

## Page 54: Conclusions

- See Notes to Page 4: “Strongly Positioned to Create Stakeholder Value Organic Growth”, Page 5: “Production Forecast”, Page 6: “Blackrod A World Class Resource”, Page 13: “Net Asset Value (MUSD)”, Page 14: “Creating Stakeholder Value - 5 Year + 5 Year FCF”, Page 20: “2024 Capital Expenditure” and Page 50: “Net Present Value per Share”.

# Reader Advisory

## Forward-Looking Statements

This presentation contains statements and information which constitute “forward-looking statements” or “forward-looking information” (within the meaning of applicable securities legislation). Such statements and information (together, “forward-looking statements”) relate to future events, including the Corporation’s future performance, business prospects or opportunities. Actual results may differ materially from those expressed or implied by forward-looking statements. The forward-looking statements contained in this presentation are expressly qualified by this cautionary statement. Forward-looking statements speak only as of the date of this presentation, unless otherwise indicated. IPC does not intend, and does not assume any obligation, to update these forward-looking statements, except as required by applicable laws.

All statements other than statements of historical fact may be forward-looking statements. Any statements that express or involve discussions with respect to predictions, expectations, beliefs, plans, projections, forecasts, guidance, budgets, objectives, assumptions or future events or performance (often, but not always, using words or phrases such as “seek”, “anticipate”, “plan”, “continue”, “estimate”, “expect”, “may”, “will”, “project”, “forecast”, “predict”, “potential”, “targeting”, “intend”, “could”, “might”, “should”, “believe”, “budget” and similar expressions) are not statements of historical fact and may be “forward-looking statements”. Forward-looking statements include, but are not limited to, statements with respect to:

- 2024 production ranges (including total daily average production), production composition, cash flows, operating costs and capital and decommissioning expenditure estimates;
- Estimates of future production, cash flows, operating costs and capital expenditures that are based on IPC’s current business plans and assumptions regarding the business environment, which are subject to change;
- IPC’s financial and operational flexibility to continue to react to recent events and navigate the Corporation through periods of volatile commodity prices;
- The ability to fully fund future expenditures from cash flows and current borrowing capacity;
- IPC’s intention and ability to continue to implement strategies to build long-term shareholder value;
- The ability of IPC’s portfolio of assets to provide a solid foundation for organic and inorganic growth;
- The continued facility uptime and reservoir performance in IPC’s areas of operation;
- Development of the Blackrod project in Canada, including estimates of resource volumes, future production, timing, regulatory approvals, third party commercial arrangements, breakeven oil prices and net present values;
- Current and future production performance, operations and development potential of the Onion Lake Thermal, Suffield, Brooks, Ferguson and Mooney operations, including the timing and success of future oil and gas drilling and optimization programs;
- The potential improvement in the Canadian oil egress situation and IPC’s ability to benefit from any such improvements;
- The ability to maintain current and forecast production in France and Malaysia;
- The intention and ability of IPC to acquire further common shares under the NCIB, including the timing of any such purchases;
- The ability of IPC to renew the NCIB and the number of common shares which may be purchased under a renewed NCIB;
- The return of value to IPC’s shareholders as a result of the NCIB;
- The ability of IPC to implement further shareholder distributions in addition to the NCIB;
- IPC’s ability to implement its greenhouse gas (GHG) emissions intensity and climate strategies and to achieve its net GHG emissions intensity reduction targets;
- IPC’s ability to implement projects to reduce net emissions intensity, including potential carbon capture and storage;
- Estimates of reserves and contingent resources;
- The ability to generate free cash flows and use that cash to repay debt;
- IPC’s continued access to its existing credit facilities, including current financial headroom, on terms acceptable to the Corporation;
- IPC’s ability to maintain operations, production and business in light of any future pandemics and the restrictions and disruptions related thereto, including risks related to production delays and interruptions, changes in laws and regulations and reliance on third-party operators and infrastructure;
- IPC’s ability to identify and complete future acquisitions;
- Expectations regarding the oil and gas industry in Canada, Malaysia and France, including assumptions regarding future royalty rates, regulatory approvals, legislative changes, and ongoing projects and their expected completion; and
- Future drilling and other exploration and development activities.

Statements relating to “reserves” and “contingent resources” are also deemed to be forward-looking statements, as they involve the implied assessment, based on certain estimates and assumptions, that the reserves and resources described exist in the quantities predicted or estimated and that the reserves and resources can be profitably produced in the future. Ultimate recovery of reserves or resources is based on forecasts of future results, estimates of amounts not yet determinable and assumptions of management.

The forward-looking statements are based on certain key expectations and assumptions made by IPC, including expectations and assumptions concerning: prevailing commodity prices and currency exchange rates; applicable royalty rates and tax laws; interest rates; future well production rates and reserve and contingent resource volumes; operating costs; our ability to maintain our existing credit ratings; our ability to achieve our performance targets; the timing of receipt of regulatory approvals; the performance of existing wells; the success obtained in drilling new wells; anticipated timing and results of capital expenditures; the sufficiency of budgeted capital expenditures in carrying out planned activities; the timing, location and extent of future drilling operations; the successful completion of acquisitions and dispositions and that we will be able to implement our standards, controls, procedures and policies in respect of any acquisitions and realize the expected synergies on the anticipated timeline or at all; the benefits of acquisitions; the state of the economy and the exploration and production business in the jurisdictions in which IPC operates and globally; the availability and cost of financing, labour and services; our intention to complete share repurchases under our normal course issuer bid program, including the funding of such share repurchases, existing and future market conditions, including with respect to the price of our common shares, and compliance with respect to applicable limitations under securities laws and regulations and stock exchange policies; and the ability to market crude oil, natural gas and natural gas liquids successfully.

Although IPC believes that the expectations and assumptions on which such forward-looking statements are based are reasonable, undue reliance should not be placed on the forward-looking statements because IPC can give no assurances that they will prove to be correct. Since forward-looking statements address future events and conditions, by their very nature they involve inherent risks and uncertainties. Actual results could differ materially from those currently anticipated due to a number of factors and risks. These include, but are not limited to:

- general global economic, market and business conditions;
- the risks associated with the oil and gas industry in general such as operational risks in development, exploration and production;
- delays or changes in plans with respect to exploration or development projects or capital expenditures;
- the uncertainty of estimates and projections relating to reserves, resources, production, revenues, costs and expenses;
- health, safety and environmental risks;
- commodity price fluctuations;
- interest rate and exchange rate fluctuations;
- marketing and transportation;
- loss of markets;
- environmental and climate-related risks;
- competition;
- innovation and cybersecurity risks related to our systems, including our costs of addressing or mitigating such risks;
- the ability to attract, engage and retain skilled employees;
- incorrect assessment of the value of acquisitions;
- failure to complete or realize the anticipated benefits of acquisitions or dispositions;
- the ability to access sufficient capital from internal and external sources;
- failure to obtain required regulatory and other approvals; and
- geopolitical conflicts, including the war between Ukraine and Russia and the conflict in the Middle East, and their potential impact on, among other things, global market conditions; and
- changes in legislation, including but not limited to tax laws, royalties, environmental and abandonment regulations.

Readers are cautioned that the foregoing list of factors is not exhaustive.

# Reader Advisory

Additional information on these and other factors that could affect IPC, or its operations or financial results, are included in the financial statements (Financial Statements) and the management's discussion and analysis for the three and nine months ended September 30, 2024 (MD&A) (See "Risk Factors", "Cautionary Statement Regarding Forward-Looking Information" and "Reserves and Resources Advisory" therein), the Corporation's Annual Information Form (AIF) for the year ended December 31, 2023 (See "Cautionary Statement Regarding Forward-Looking Information", "Reserves and Resources Advisory" and "Risk Factors" therein) and other reports on file with applicable securities regulatory authorities, including previous financial reports, management's discussion and analysis and material change reports, which may be accessed through the SEDAR+ website ([www.sedarplus.ca](http://www.sedarplus.ca)) or IPC's website ([www.international-petroleum.com](http://www.international-petroleum.com)).

Management of IPC approved the production, operating costs, operating cash flow, capital and decommissioning expenditures and free cash flow guidance and estimates contained herein as of the date of this presentation. The purpose of these guidance and estimates is to assist readers in understanding IPC's expected and targeted financial results, and this information may not be appropriate for other purposes.

IPC completed the Cor4 acquisition on March 3, 2023. The Financial Statements for periods in 2023 have been prepared on that basis, with revenues and expenses related to the assets acquired in the Cor4 acquisition included in the Financial Statements from March 3, 2023. Certain historical operational and financial information included in this presentation and the MD&A, including production, operating costs, OCF, FCF and EBITDA related to the assets acquired in the Cor4 acquisition, are reported based on the effective date of the Cor4 acquisition of January 1, 2023.

## Non-IFRS Measures

References are made in this presentation to "operating cash flow" (OCF), "free cash flow" (FCF), "Earnings Before Interest, Tax, Depreciation and Amortization" (EBITDA), "operating costs" and "net debt"/"net cash", which are not generally accepted accounting measures under International Financial Reporting Standards (IFRS) and do not have any standardized meaning prescribed by IFRS and, therefore, may not be comparable with similar measures presented by other public companies. Non-IFRS measures should not be considered in isolation or as a substitute for measures prepared in accordance with IFRS.

The Corporation uses non-IFRS measures to provide investors with supplemental measures to assess the cash generated by and the financial performance and position of the Corporation. Management also uses non-IFRS measures internally in order to facilitate operating performance comparisons from period to period, prepare annual operating budgets and assess the Corporation's ability to meet its future capital expenditure and working capital requirements. Management believes these non-IFRS measures are important supplemental measures of operating performance because they highlight trends in the core business that may not otherwise be apparent when relying solely on IFRS financial measures. Management believes such measures allow for assessment of the Corporation's operating performance and financial condition on a basis that is more consistent and comparable between reporting periods. The Corporation also believes that securities analysts, investors and other interested parties frequently use non-IFRS measures in the evaluation of issuers. Forward-looking statements are provided for the purpose of presenting information about management's current expectations and plans relating to the future and readers are cautioned that such statements may not be appropriate for other purposes.

The definition and reconciliation of each non-IFRS measure is presented in IPC's MD&A (See "Non-IFRS Measures" therein).

Estimated FCF generation is based on IPC's current business plans over the periods of 2024 to 2028 and 2029 to 2033. Assumptions include average net production of approximately 55 Mboepd over the period of 2024 to 2028, average net production of approximately 65 Mboepd over the period of 2029 to 2033, average Brent oil prices of USD 75 to 95 per boe escalating by 2% per year, and average Brent to Western Canadian Select differentials and average gas prices as estimated by IPC's independent reserves evaluator and as further described in the AIF. IPC's current business plans and assumptions, and the business environment, are subject to change. Actual results may differ materially from forward-looking estimates and forecasts.

## Reserves and Resources Advisory

This presentation contains references to estimates of gross and net reserves and resources attributed to the Corporation's oil and gas assets. Gross reserves / resources are the working interest (operating or non-operating) share before deduction of royalties and without including any royalty interests. Net reserves / resources are the working interest (operating or non-operating) share after deduction of royalty obligations, plus royalty interests in reserves/resources, and in respect of PSCs in Malaysia, adjusted for cost and profit oil. Unless otherwise indicated, reserves / resource volumes are presented on a gross basis.

Reserve estimates, contingent resource estimates and estimates of future net revenue in respect of IPC's oil and gas assets in Canada are effective as of December 31, 2023, and are included in the reports prepared by Sproule Associates Limited (Sproule), an independent qualified reserves evaluator, in accordance with National Instrument 51-101 – Standards of Disclosure for Oil and Gas Activities (NI 51-101) and the Canadian Oil and Gas Evaluation Handbook (the COGE Handbook) and using Sproule's December 31, 2023 price forecasts.

Reserve estimates, contingent resource estimates and estimates of future net revenue in respect of IPC's oil and gas assets in France and Malaysia are effective as of December 31, 2023, and are included in the report prepared by ERC Equipoise Ltd. (ERCE), an independent qualified reserves auditor, in accordance with NI 51-101 and the COGE Handbook, and using Sproule's December 31, 2023 price forecasts.

The price forecasts used in the Sproule and ERCE reports are available on the website of Sproule ([sproule.com](http://sproule.com)) and are contained in the AIF. These price forecasts are as at December 31, 2023 and may not be reflective of current and future forecast commodity prices.

The reserve life index (RLI) is calculated by dividing the 2P reserves of 468 MMboe as at December 31, 2023, by the mid-point of the 2024 production guidance of 46,000 to 48,000 boepd.

The product types comprising the 2P reserves and contingent resources described in this presentation are contained in the AIF. See also "Supplemental Information regarding Product Types" below. Light, medium and heavy crude oil and bitumen reserves/resources disclosed in this presentation include solution gas and other by-products.

"2P reserves" means proved plus probable reserves. "Proved reserves" are those reserves that can be estimated with a high degree of certainty to be recoverable. It is likely that the actual remaining quantities recovered will exceed the estimated proved reserves. "Probable reserves" are those additional reserves that are less certain to be recovered than proved reserves. It is equally likely that the actual remaining quantities recovered will be greater or less than the sum of the estimated proved plus probable reserves.

Each of the reserves categories reported (proved and probable) may be divided into developed and undeveloped categories. "Developed reserves" are those reserves that are expected to be recovered from existing wells and installed facilities or, if facilities have not been installed, that would involve a low expenditure (for example, when compared to the cost of drilling a well) to put the reserves on production. The developed category may be subdivided into producing and non-producing. "Developed producing reserves" are those reserves that are expected to be recovered from completion intervals open at the time of the estimate. These reserves may be currently producing or, if shut-in, they must have previously been on production, and the date of resumption of production must be known with reasonable certainty. "Developed non-producing reserves" are those reserves that either have not been on production, or have previously been on production, but are shut-in, and the date of resumption of production is unknown. "Undeveloped reserves" are those reserves expected to be recovered from known accumulations where a significant expenditure (for example, when compared to the cost of drilling a well) is required to render them capable of production. They must fully meet the requirements of the reserves classification (proved, probable) to which they are assigned.

Contingent resources are those quantities of petroleum estimated, as of a given date, to be potentially recoverable from known accumulations using established technology or technology under development, but which are not currently considered to be commercially recoverable due to one or more contingencies. Contingencies are conditions that must be satisfied for a portion of contingent resources to be classified as reserves that are: (a) specific to the project being evaluated; and (b) expected to be resolved within a reasonable timeframe. Contingencies may include factors such as economic, legal, environmental, political, and regulatory matters, or a lack of markets. It is also appropriate to classify as contingent resources the estimated discovered recoverable quantities associated with a project in the early evaluation stage. Contingent resources are further classified in accordance with the level of certainty associated with the estimates and may be sub-classified based on a project maturity and/or characterized by their economic status.

There are three classifications of contingent resources: low estimate, best estimate and high estimate. Best estimate is a classification of estimated resources described in the COGE Handbook as being considered to be the best estimate of the quantity that will be actually recovered. It is equally likely that the actual remaining quantities recovered will be greater or less than the best estimate. If probabilistic methods are used, there should be at least a 50% probability that the quantities actually recovered will equal or exceed the best estimate.

# Reader Advisory

Contingent resources are further classified based on project maturity. The project maturity subclasses include development pending, development on hold, development unclarified and development not viable. All of the Corporation's contingent resources are classified as either development on hold or development unclarified. Development on hold is defined as a contingent resource where there is a reasonable chance of development, but there are major non-technical contingencies to be resolved that are usually beyond the control of the operator. Development unclarified is defined as a contingent resource that requires further appraisal to clarify the potential for development and has been assigned a lower chance of development until commercial contingencies can be clearly defined. Chance of development is the probability of a project being commercially viable. Where risked resources are presented, they have been adjusted based on the chance of development by multiplying the unrisked values by the chance of development.

References to "unrisked" contingent resources volumes means that the reported volumes of contingent resources have not been risked (or adjusted) based on the chance of commerciality of such resources. In accordance with the COGE Handbook for contingent resources, the chance of commerciality is solely based on the chance of development based on all contingencies required for the re-classification of the contingent resources as reserves being resolved. Therefore unrisked reported volumes of contingent resources do not reflect the risking (or adjustment) of such volumes based on the chance of development of such resources.

The contingent resources reported in this presentation are estimates only. The estimates are based upon a number of factors and assumptions each of which contains estimation error which could result in future revisions of the estimates as more technical and commercial information becomes available. The estimation factors include, but are not limited to, the mapped extent of the oil and gas accumulations, geologic characteristics of the reservoirs, and dynamic reservoir performance. There are numerous risks and uncertainties associated with recovery of such resources, including many factors beyond the Corporation's control. There is uncertainty that it will be commercially viable to produce any portion of the contingent resources referred to in this presentation. References to "contingent resources" do not constitute, and should be distinguished from, references to "reserves".

2P reserves and contingent resources included in the reports prepared by Sproule and ERCE have been aggregated by IPC. Estimates of reserves, resources and future net revenue for individual properties may not reflect the same level of confidence as estimates of reserves, resources and future net revenue for all properties, due to aggregation. This presentation contains estimates of the net present value of the future net revenue from IPC's reserves and contingent resources. The estimated values of future net revenue disclosed in this presentation do not represent fair market value. There is no assurance that the forecast prices and cost assumptions used in the reserves and resources evaluations will be attained and variances could be material.

BOEs may be misleading, particularly if used in isolation. A BOE conversion ratio of 6 thousand cubic feet (Mcf) per 1 barrel (bbl) is based on an energy equivalency conversion method primarily applicable at the burner tip and does not represent a value equivalency at the wellhead. As the value ratio between natural gas and crude oil based on the current prices of natural gas and crude oil is significantly different from the energy equivalency of 6:1, utilizing a 6:1 conversion basis may be misleading as an indication of value.

## Supplemental Information regarding Product Types

The following table is intended to provide supplemental information about the product type composition of IPC's net average daily production figures provided in this document:

	Heavy Crude Oil (Mbopd)	Light and Medium Crude Oil (Mbopd)	Conventional Natural Gas (per day)	Total (Mboepd)
<b>Three months ended</b>				
September 30, 2024	21.9	7.8	91.9 MMcf (15.3 Mboe)	45.0
September 30, 2023	25.8	7.1	103.4 MMcf (17.3 Mboe)	50.2
<b>Nine months ended</b>				
September 30, 2024	23.7	7.9	94.8 MMcf (15.8 Mboe)	47.4
September 30, 2023	25.9	8.6	102.4 MMcf (17.1 Mboe)	51.6
<b>Year ended</b>				
December 31, 2023	25.8	8.1	102.8 MMcf (17.1 Mboe)	51.1

This presentation also makes reference to IPC's forecast total average daily production of 46,000 to 48,000 boepd for 2024. IPC estimates that approximately 50% of that production will be comprised of heavy oil, approximately 16% will be comprised of light and medium crude oil and approximately 34% will be comprised of conventional natural gas.

# Reader Advisory

This presentation includes oil and gas metrics including “cash margin netback”, “taxation netback”, “operating cash flow netback”, “cash taxes”, “EBITDA netback” and “profit netback”. Such metrics do not have a standardized meaning under IFRS or otherwise, and as such may not be reliable. This information should not be used to make comparisons.

- “Cash margin netback” is calculated on a per boe basis as oil and gas sales, less operating, tariff/transportation and production tax expenses. Netback is a common metric used in the oil and gas industry and is used by management to measure operating results on a per boe basis to better analyze performance against prior periods on a comparable basis.
- “Taxation netback” is calculated on a per boe basis as current tax charge/credit less deferred tax charge/credit. Taxation netback is used to measure taxation on a per boe basis.
- “Operating cash flow netback” is calculated as cash margin netback less cash taxes. Operating cash flow netback is used to measure operating results on a per boe basis of cash flow.
- “Cash taxes” is calculated as taxes payable in cash, and not only for accounting purposes. Cash taxes is used to measure cash flow.
- “EBITDA netback” is calculated as cash margin netback less general and administration expenses. EBITDA netback is used by management to measure operating results on a per boe basis.
- “Profit netback” is calculated as cash margin netback less depletion/depreciation, general and administration expenses and financial items. Profit netback is used by management to measure operating results on a per boe basis.

## Currency

All dollar amounts in this presentation are expressed in United States dollars, except where otherwise noted. References herein to USD mean United States dollars. References herein to CAD mean Canadian dollars.

## Oil related terms and measurements

AECO	The daily average benchmark price for natural gas at the AECO hub in southeast Alberta
AESO	Alberta Electric System Operator
API	An indication of the specific gravity of crude oil on the API (American Petroleum Institute) gravity scale Alkaline surfactant polymer (an EOR process)
bbl	Barrel (1 barrel = 159 litres)
boe	Barrels of oil equivalents
boepd	Barrels of oil equivalents per day
bopd	Barrels of oil per day
Bcf	Billion cubic feet
Bscf	Billion standard cubic feet
C5	Condensate
CO <sub>2</sub> e	Carbon dioxide equivalents, including carbon dioxide, methane and nitrous oxide
Empress	The benchmark price for natural gas at the Empress point at the Alberta/Saskatchewan border
EOR	Enhanced Oil Recovery
GJ	Gigajoules
Mbbl	Thousand barrels
MMbbl	Million barrels
Mboe	Thousand barrels of oil equivalents
Mboepd	Thousand barrels of oil equivalents per day
Mbopd	Thousand barrels of oil per day
MMboe	Million barrels of oil equivalents
MMbtu	Million British thermal units
Mcf	Thousand cubic feet
Mcfpd	Thousand cubic feet per day
MMcf	Million cubic feet
MW	Mega watt
MWh	Mega watt per hour
NGL	Natural gas liquid
SAGD	Steam assisted gravity drainage (a thermal recovery process)
WTI	West Texas Intermediate (a light oil reference price)
WCS	Western Canadian Select (a heavy oil reference price)
